

SHARK TANK INDIA

Startup Investment Analysis — Seasons 1–5

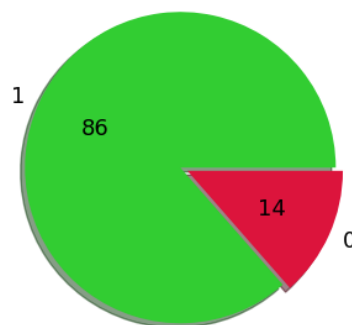

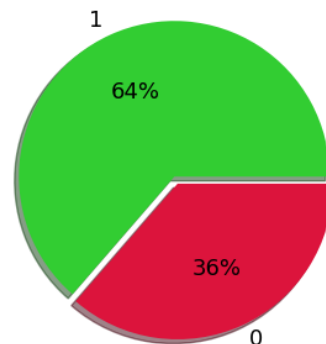

Industry-wise investor trends and founder success patterns

Prepared from the supplied Shark Tank India analysis notebook and its associated dataset structure. The notebook reports 5 seasons and 789 startup pitches, and analyzes offers, accepted deals, investment amounts, equity, debt, shark participation and founder ask/equity patterns.

Metric	Result
Seasons analyzed	5
Startup pitches	789
Offers received	502 (64%)
Offers not received	287 (36%)
Offers accepted	434 (86% of offers)
Offers not accepted	68 (14% of offers)
Total amount asked	■976.17 Cr
Total amount invested	■348.23 Cr
Debt / loan amount	■47.96 Cr

1. Deal Funnel & Investment Overview

The analysis shows a clear funnel from pitches to offers and then accepted offers. The notebook reports 502 offers from 789 pitches (64%). Of those offers, 434 were accepted, representing 86% of received offers.

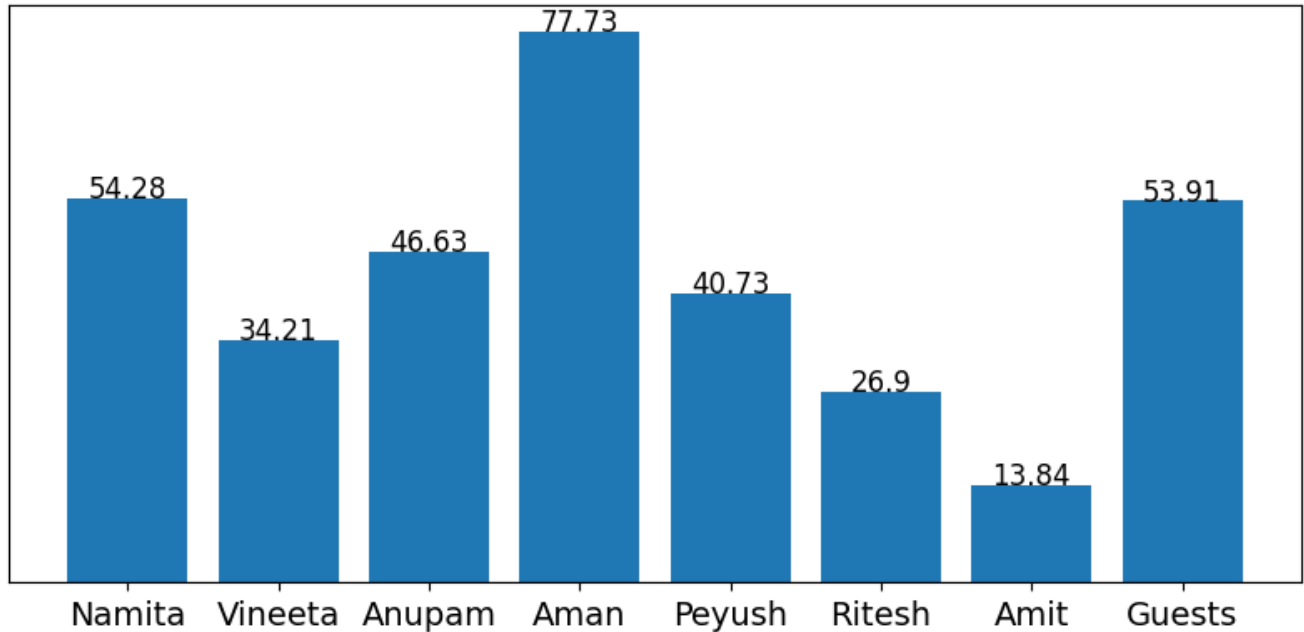

Investment scale: startups collectively asked for ■976.17 crore, while sharks invested ■348.23 crore. The notebook also reports ■47.96 crore in loan/debt funding.

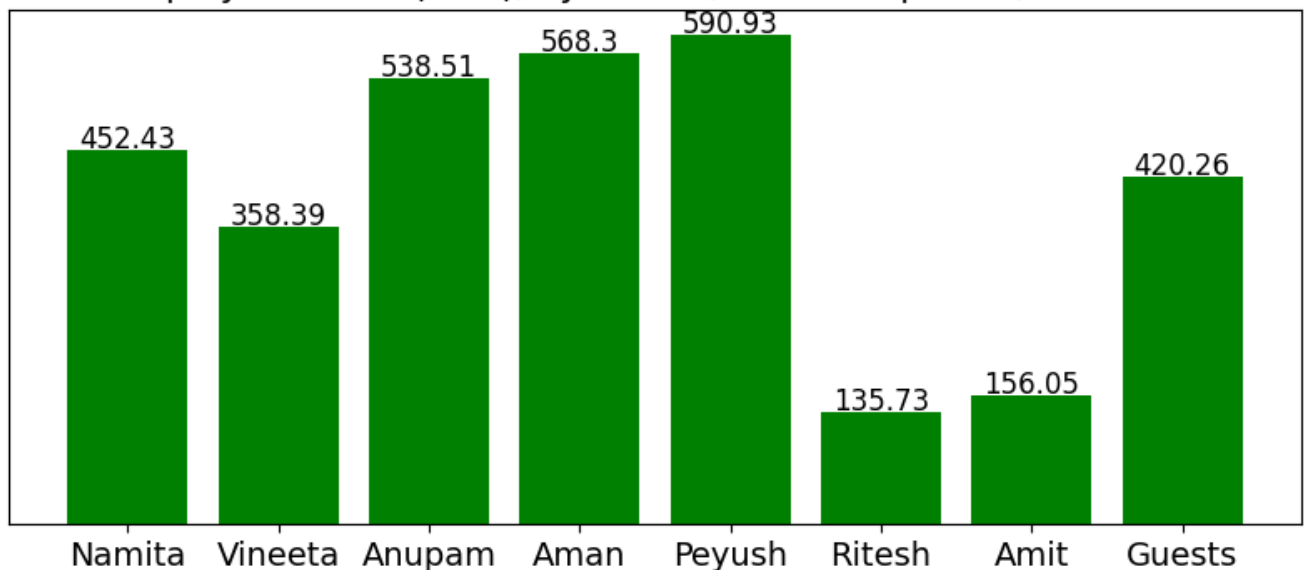

2. Investor Trends

The notebook contains dedicated shark-level analysis for investment amount, equity received, debt/loan funding and the number of companies invested in. These measures are intended to distinguish between sharks who deploy more capital and sharks who participate in more deals.

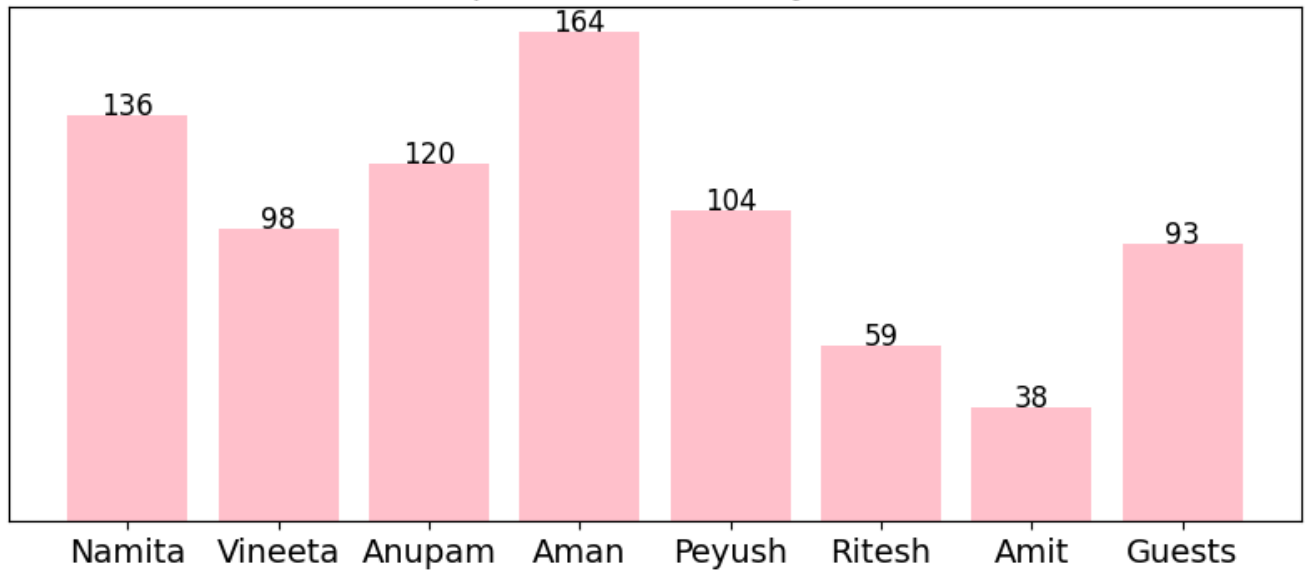

Total Investment Amount (in crores) by Sharks, in all seasons

Total equity received (in %), by Sharks, in all companies, in all seasons

Total number of companies invested, by Sharks, in all seasons

3. Industry-wise Investor Trends

The supplied notebook explicitly analyzes the Industry field across all seasons and contains an industry-wise startup visualization. The dataset also contains separate investment-amount, equity and debt fields for individual sharks, enabling an Industry × Shark analysis.

Analysis dimension	Recommended measure
Industry	Number of startups / pitches
Industry × shark	Sum of shark investment amount
Industry × shark	Equity received
Industry × season	Total deal amount
Industry × deal status	Received / accepted offers

For the Tableau version of this deliverable, use Industry as the primary filter and place Shark, Season and Deal Status as interactive filters. This converts the notebook's industry analysis into an investor-trend dashboard suitable for business stakeholders.

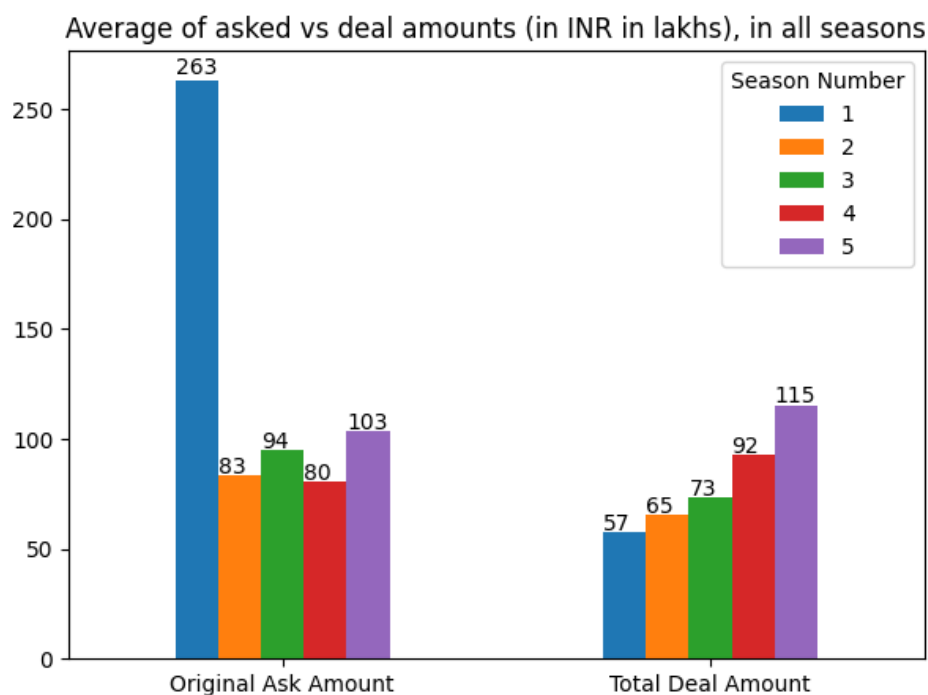

Important source fields

Industry, Original Ask Amount, Original Offered Equity, Received Offer, Accepted Offer, Total Deal Amount, Total Deal Equity, Total Deal Debt and the individual shark investment fields are all part of the supplied dataset.

4. Founder Success Pattern

The notebook directly examines which ask amounts and equity offers are associated with successful and unsuccessful pitches. Its strongest recurring successful combinations include ■50 lakh–■1 crore asks paired with roughly 1–5% offered equity.

Pattern	Notebook result
Overall offer rate	64% received an offer
Offer acceptance	86% of received offers were accepted
Frequent deal ask amounts	■1 Cr, ■50 L, ■75 L, ■60 L and ■80 L appear prominently
Frequent deal equity	10%, 5%, 1%, 4% and 3% appear prominently
Successful ask/equity combinations	■1 Cr for 1–2%; ■50 L for 1–2% and 5%; ■75 L for 1%
Common rejected combinations	■50 L for 5%; ■1 Cr for 1–2%; ■75 L for 5%

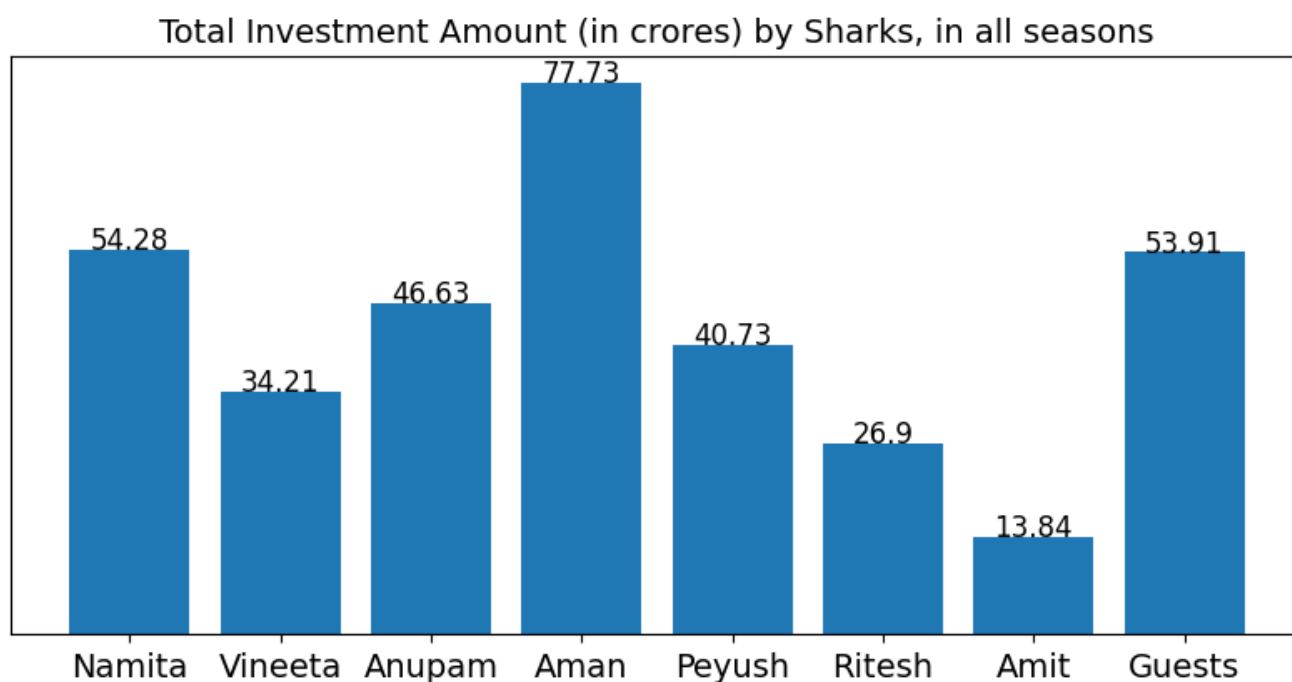

The notebook also reports that 80 startups received a deal amount greater than their original ask and 344 startups had final deal equity greater than their original offered equity.

5. Highest Investment & Practical Conclusions

The notebook's top-deal analysis identifies NOOE as the largest listed deal at ₹5 crore, followed by SaveSage and TheNaturikCo at ₹4 crore each. Several other startups appear at ₹3 crore and ₹2.5 crore deal sizes.

For a business-facing dashboard, the most useful KPIs are therefore: total pitches, offers received, accepted deals, total investment, average deal size, investment by industry, investment by shark and season-wise investment.

Recommended decision questions: Which industries attract the most capital? Which sharks deploy the most capital? Which ask/equity combinations are associated with offers? How does deal activity change by season?

Source note: primary analysis is the uploaded 'Shark Tank India Analysis.ipynb' and the accompanying Shark Tank India dataset documentation. The public repository corresponding to this notebook describes the same Seasons 1–5 dataset structure.
